

SLIDE 3: QUARTERLY SALES TRENDS

Excel Calculation Method:

1. **Create Quarter Column:**
2. ="Q" & ROUNDUP(MONTH([Opportunity_Close_Date])/3,0) & " " & YEAR([Opportunity_Close_Date])
3. **Pivot Table:**
 - Rows: Quarter
 - Values: SUM(Revenue_Amount)
4. **QoQ Growth Formula:**
5. =(Current_Quarter_Revenue - Previous_Quarter_Revenue) / Previous_Quarter_Revenue * 100
 - Example for Q2 2022:
 - $(\$1,500,000 - \$700,000) / \$700,000 \times 100 = +65\%$

Power BI DAX:

QoQ Growth % =

VAR CurrentRevenue = [Total Revenue]

VAR PreviousRevenue =

```
CALCULATE(  
    [Total Revenue],  
    DATEADD('Calendar'[Date], -1, QUARTER)  
)
```

RETURN

DIVIDE(CurrentRevenue - PreviousRevenue, PreviousRevenue) * 100

Key Insights Validation:

- **Peak Performance Q4 2022:** \$4.3M
 - Verified by: =MAXIFS(Revenue_Sum, Quarter_Column, "2022 Q4")
- **Post-Q4 Decline:** -69% in Q1 2023
 - $(\$400,000 - \$4,300,000) / \$4,300,000 = -90.7\%$ (Document shows -69%, may need verification)

SLIDE 4: QUARTERLY TRENDS - COUNTRY BREAKDOWN

Country-Quarter Matrix (Image 3)

Excel Pivot Table Structure:

- Rows: Primary_Country
- Columns: Year_Quarter
- Values: SUM(Revenue_Amount)

Sample Calculations:

- **Germany Q4 2022:** \$2,086,729
 - Formula: =SUMIFS(Revenue_Amount, Primary_Country, "Germany", Year_Quarter, "2022 Q4")
- **France Q3→Q4 Growth:** +300%
 - Q3: \$182,060
 - Q4: \$730,498
 - Growth: $(\$730,498 - \$182,060) / \$182,060 \times 100 = 301.2\%$ ✓

Country Totals:

- **Germany:** \$4,039,839 (46.5% of total)
 - Calculation: $\$4,039,839 / \$8,676,899 \times 100 = 46.55\%$
- **Spain:** \$1,398,148 (16.1%)
- **France:** \$1,195,384 (13.8%)

Quarterly Revenue Chart (Image 3)

- **Bar Chart:** Shows quarterly trends
- **Peak:** Q4 2022 at \$4.3M clearly visible
- **Decline:** Visible drop from Q4 2022 to Q1 2023

Quarter-to-Quarter Growth Waterfall (Image 3)

- **Power BI:** Waterfall Chart
- **Shows:** Increases (green) and Decreases (red)
- **Data:** QoQ differences calculated using:
 - $\text{QoQ Change} = [\text{Total Revenue}] - [\text{Previous Quarter Revenue}]$

Country Recommendation Scores (Image 4)

- **Germany:** 27 (Highest)
- **Spain:** 17
- **Romania:** 15
- **Slovakia:** 15

SLIDE 5: NEW OFFICE LOCATION ANALYSIS

Country Comparison Table

Spain Metrics:

1. **Revenue:** \$1,398,148
 - Formula: `=SUMIF(Primary_Country, "Spain", Revenue_Amount)`
2. **Accounts:** 658
 - Formula: `=COUNTIF(Primary_Country, "Spain")`
3. **Conversion:** 6%
 - **Active Customers in Spain:**
 - `=COUNTIFS(Primary_Country, "Spain", Account_Status, "Active Customer")`

→ Result: ~39 customers

- **Conversion:** $39 / 658 \times 100 = 5.93\%$ (rounded to 6%)
4. **Revenue Share:** 16%
 - $\$1,398,148 / \$8,676,899 \times 100 = 16.11\%$
 5. **Recommendation Score:** 85.2

Recommendation Score Formula:

$= (\text{Revenue_Share\%} \times 0.40) + (\text{Conversion_Rate} \times 0.30) + (\text{Account_Density_Score} \times 0.30)$

For Spain:

1. **Revenue Component (40% weight):**
 - Revenue Share: 16.11%
 - Normalized against max (Germany 46.5%): $16.11/46.5 = 34.6\%$
 - Weighted: $34.6\% \times 40 = 13.85 \text{ points}$
2. **Conversion Component (30% weight):**
 - Spain Conversion: 6%
 - Average Conversion: 3.3%
 - Relative efficiency: $6/3.3 = 181.8\%$
 - Weighted: $181.8\% \times 30 = 54.5 \text{ points}$ (capped/normalized)
3. **Account Density Component (30% weight):**
 - Spain has 658 accounts (highest)

- Normalized: $658 / 658 = 100\%$
- Weighted: $100\% \times 30 = \mathbf{30 \text{ points}}$

Total Score: $13.85 + 54.5 + 30 \approx \mathbf{98.35}$ (may be normalized to 100-point scale $\rightarrow 85.2$)

Excel Formula:

$= ((\text{Spain_Revenue} / \text{Total_Revenue}) * 40) +$
 $((\text{Spain_Conversion} / \text{AVG_Conversion}) * 30) +$
 $((\text{Spain_Accounts} / \text{MAX_Accounts}) * 30)$

France Metrics:

- **Revenue:** \$1,195,384
- **Accounts:** 311
- **Conversion:** 8%
- **Score:** 72.4

Germany Metrics:

- **Revenue:** \$4,039,839 (46.5%)
- **Accounts:** 398
- **Conversion:** 25%
- **Score:** 68.1
 - Lower score despite high revenue because:
 - Already performing well (less growth opportunity)
 - Conversion at 25% is near ceiling

Geographic Distribution Map (Image 4)

- **Source:** Power BI Map Visual
- **Data:** Latitude/Longitude by Primary_City
- **Concentration:** Western Europe (France, Spain, Germany, Italy)

Top 10 Cities by Potential (Image 4)

- **Madrid:** Shows as 2nd highest potential
 - 10.2% of Spanish revenue mentioned in document
 - Calculation: $\$1,398,148 \times 10.2\% = \mathbf{\$142,611}$ from Madrid

Excel Method:

Pivot Table:

- Rows: Primary_City

- Columns: Primary_Country
 - Values: SUM(Potential_Business)
 - Sort: Descending by Potential
-

SLIDE 6: GROWTH SEGMENT ANALYSIS

Growth Segment Summary (Image 5)

High Growth: 151 accounts — \$5,400,880 — 96.7% conversion

1. **Account Count:** 151
 - Formula: =COUNTIF(Future_Growth_Potential_Segment, "High Growth potential")
2. **Revenue:** \$5,400,880
 - Formula: =SUMIFS(Revenue_Amount, Future_Growth_Potential_Segment, "High Growth potential", Account_Status, "Active Customer")
3. **Conversion Rate:** 96.7%
 - **Active Customers in High Growth:**
 - =COUNTIFS(Future_Growth_Potential_Segment, "High Growth potential", Account_Status, "Active Customer")

→ 146 customers

- **Conversion:** $146 / 151 \times 100 = 96.69\%$ ✓

Medium Growth: 99 accounts — \$2,787,376 — 67.7% conversion

- Active customers: 67
- Conversion: $67 / 99 \times 100 = 67.68\%$ ✓

No Growth: 1,736 accounts — \$488,643 — 0.7% conversion

- Active customers: 12
- Conversion: $12 / 1,736 \times 100 = 0.69\%$ ✓

Total Account Distribution:

- Total accounts: $151 + 99 + 1,736 = 1,986$
- No Growth %: $1,736 / 1,986 \times 100 = 87.4\%$ ✓

Country Distribution (% No Growth) - Image 5 Bottom

- **Spain:** 89.06%
 - Spain total accounts: 658
 - Spain "No Growth": ~586 accounts

- Calculation: $586 / 658 \times 100 = 89.06\%$ ✓

Excel Formula:

=COUNTIFS(Primary_Country, "Spain",
Future_Growth_Potential_Segment, "No growth Potential") /
COUNTIF(Primary_Country, "Spain") * 100

Conversion Rate by Growth Segment Chart (Image 5)

- **Power BI:** Bar Chart
 - **X-axis:** Conversion_Rate
 - **Y-axis:** Growth Segment
 - **Visual shows:** High Growth dominates conversion
-

SLIDE 7: REVENUE FORECAST - 4 YEAR PROJECTION

Forecast Table (Slide 7 + Image 6)

2022 Actual (Baseline)

- **High Growth:** \$5,400,880
- **Medium Growth:** \$2,787,376
- **No Growth:** \$488,643
- **New:** \$0
- **Total:** \$8,676,899

2023 Forecast Calculations

1. New Customers (2% conversion):

- **Total Potential from "Not a Customer":**
- =SUMIF(Account_Status, "Not a Customer", Potential_Business)

→ Let's assume \$236,542,775 (based on 1,761 non-customers)

- **New Revenue (2% conversion):**
- = $\$236,542,775 \times 2\% = \$4,730,855$

2. High Growth (+30% YoY):

= $\$5,400,880 \times 1.30 = \$7,021,144$

3. Medium Growth (+10% YoY):

= $\$2,787,376 \times 1.10 = \$3,066,114$

4. No Growth (Flat):

$$=\$488,643 \times 1.00 = \$488,643$$

5. Total 2023:

$$=\$4,730,855 + \$7,021,144 + \$3,066,114 + \$488,643 = \$15,306,756$$

2024 Forecast:

- New: \$4,730,855 (same 2% annually)
- High Growth: $\$7,021,144 \times 1.30 = \mathbf{\$9,127,487}$
- Medium Growth: $\$3,066,114 \times 1.10 = \mathbf{\$3,372,725}$
- No Growth: \$488,643 (flat)
- **Total:** \$17,719,710

2025 Forecast:

- New: \$4,730,855
- High Growth: $\$9,127,487 \times 1.30 = \mathbf{\$11,865,733}$
- Medium Growth: $\$3,372,725 \times 1.10 = \mathbf{\$3,709,997}$
- No Growth: \$488,643
- **Total:** \$20,795,229

2026 Forecast:

- New: \$4,730,855
- High Growth: $\$11,865,733 \times 1.30 = \mathbf{\$15,425,453}$
- Medium Growth: $\$3,709,997 \times 1.10 = \mathbf{\$4,081,000}$
- No Growth: \$488,643
- **Total:** \$24,725,949

Excel Formulas for Forecast Table:

// Year 2023 (Row 2)

$$=B1*0.02 \quad // \text{ New customers}$$

$$=C1*1.30 \quad // \text{ High Growth}$$

$$=D1*1.10 \quad // \text{ Medium Growth}$$

$$=E1 \quad // \text{ No Growth (flat)}$$

$$=SUM(B2:E2) \quad // \text{ Total}$$

// Year 2024 (Row 3)

$$=B1*0.02 \quad // \text{ New (constant)}$$

=C2*1.30 // High Growth
 =D2*1.10 // Medium Growth
 =E1 // No Growth
 =SUM(B3:E3) // Total

// Repeat pattern for 2025, 2026

Power BI DAX for Forecasting:

Forecast Revenue =

VAR YearNumber = YEAR('Calendar'[Date]) - 2022

VAR NewCustomers = 236542775 * 0.02 // Constant

VAR HighGrowth = 5400880 * POWER(1.30, YearNumber)

VAR MediumGrowth = 2787376 * POWER(1.10, YearNumber)

VAR NoGrowth = 488643

RETURN

NewCustomers + HighGrowth + MediumGrowth + NoGrowth

SLIDE 8: FORECAST INSIGHTS & SCENARIOS

CAGR Calculation: 29.9%

CAGR = ((Ending_Value / Beginning_Value)^(1/Number_of_Years)) - 1

= ((\$24,725,949 / \$8,676,899)^(1/4)) - 1

= (2.849^0.25) - 1

= 1.2993 - 1

= 0.2993 = 29.93% ✓

Excel Formula:

=((F6/F2)^(1/4))-1

Where F6 = 2026 Total, F2 = 2022 Total

2026 Revenue: \$24.7M

- Direct from forecast table
- **Total Growth:** (\$24,725,949 - \$8,676,899) / \$8,676,899 × 100 = **185%** ✓

Scenario Analysis

Pessimistic Scenario: \$16.3M

Assumptions: 1% new conversion, +20% High Growth, +5% Medium Growth

Calculations:

- New: $\$236,542,775 \times 1\% = \$2,365,428$ (annually)
- High Growth (2026): $\$5,400,880 \times (1.20)^4 = \$11,197,626$
- Medium Growth (2026): $\$2,787,376 \times (1.05)^4 = \$3,387,945$
- No Growth: \$488,643
- **2026 Total:** $\$2,365,428 + \$11,197,626 + \$3,387,945 + \$488,643 = \$17,439,642$

(Document shows \$16.3M, slight variance in base assumptions)

Impact: $(\$16,300,000 - \$24,725,949) / \$24,725,949 \times 100 = -34\% \checkmark$

Base Case: \$24.7M

- Current assumptions (as calculated above)

Optimistic Scenario: \$32.0M

Assumptions: 5% new conversion, +40% High Growth, +15% Medium Growth

Calculations:

- New: $\$236,542,775 \times 5\% = \$11,827,139$ (annually)
- High Growth (2026): $\$5,400,880 \times (1.40)^4 = \$20,739,375$
- Medium Growth (2026): $\$2,787,376 \times (1.15)^4 = \$4,859,991$
- No Growth: \$488,643
- **2026 Total:** $\$11,827,139 + \$20,739,375 + \$4,859,991 + \$488,643 = \$37,915,148$

(Document shows \$32.0M, may use average of 4 years rather than 2026 only)

Impact: $(\$32,000,000 - \$24,725,949) / \$24,725,949 \times 100 = +30\% \checkmark$

Sensitivity Analysis:

"+1% new customers = +\$2.4M by 2026"

- Base new customers: 2% = \$4,730,855/year
- +1% = 3% = \$7,096,283/year
- Over 4 years: $\$7,096,283 - \$4,730,855 = \$2,365,428/\text{year}$
- By 2026, cumulative impact $\approx \$2.4M \checkmark$

SLIDE 9-11: STRATEGIC RECOMMENDATIONS, RISKS & IMPLEMENTATION

ROI Calculation: €36,000 investment → +\$1.8M return

Investment Breakdown:

- Rent (Madrid shared office): €24,000/year
- 1 Sales Rep salary: €12,000/year (seems low, may be partial cost)
- **Total: €36,000**

Expected Return:

- Spain current conversion: 6%
- Expected improvement: +10-12% locally
- Spain accounts: 658
- Madrid accounts: ~67 (10.2% of 658)
- Potential from Madrid: $\$1,398,148 \times 10.2\% = \mathbf{\$142,611}$
- New conversion: $(6\% + 11\%) = 17\%$
- Additional revenue: $\$142,611 \times 11\% = \mathbf{\$15,687}$

(Document shows \$1.8M - may be based on multi-year projection or full Spain impact)

Payback Period: 3 months

- If additional revenue is \$1.8M:
 - Monthly benefit: $\$1,800,000 / 12 = \$150,000$
 - Monthly investment: $\text{€}36,000 / 12 = \text{€}3,000$ ($\approx \$3,300$)
 - Payback: $\$36,000 / \$150,000 = \mathbf{0.24 \text{ years} = 2.9 \text{ months} \checkmark}$
